Dear Sir:

In response to the request for species election mailed February 1, 2005, Applicant elects Species C, Figures 10-11 with traverse on the grounds that Species D (Figure 12) should be included in the election. Species C is directed to preloading in the form of actuators for adjusting the level of compression, and the invention of Species D simply adds that the "shoe" includes a plurality of segments, each adjustable through a separate actuator. Accordingly, it is felt that the invention of claim 20 is not patentably distinct over Species C.

Applicant contends that all pending claims are readable upon the election, since generic claim 15 includes elements preloaded through compression, which is readable on Species C and D. Applicant appreciates the Examiner's renumbering of the claims with respect to the typographical error.

Respectfully submitted,

By:
